THE UNIQUE CDL EXPERIENCE

A photograph of a winter scene. In the foreground, a green metal roof is visible, heavily laden with snow and long icicles hanging from the eaves. The background consists of a dense forest of bare trees under a bright, overcast blue sky. The overall color palette is dominated by blues, greens, and whites, creating a cold and serene atmosphere.

Finally
**SPRING
TIME**

American robins have returned to the region and mild temperatures are expected throughout the week.

Maple sap begins to flow slowly but surely and the tanks will be full within a few days. All the ingredients are there to allow the festivities to begin in the sugar shacks of the region.

TUBING AND FITTINGS

BUCKETS AND ACCESSORIES

*between
tradition and*
**TECHNO
LOGY**

Maple syrup production, in the past was considered artisanal, has developed and is now emerging as a specialized production. Thus, we were able to develop mechanized techniques and modern methods to better organize the Sugar bush, the gathering and processing of the maple sap.

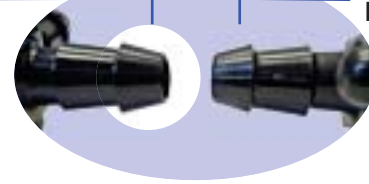

Maple producers can now count on new technological tools, such as camera systems or remote controls, to increase production and, in turn, profitability.

MAXFLOW FITTINGS

The new line of **5/16" Maxflow fittings** was specifically designed and developed for maple producers wanting to operate over 25 in-hg (high vacuum). These fittings enable a perfect seal with a vacuum level **beyond 25 in-hg** and offers the following advantages:

- > **No parting lines on the first barb.**
- > Precision moulding.
- > Eliminates micro leaks caused by molding lines.
- > Better grip on the tubing.

ACCORDING TO A STUDY

FROM THE ACER CENTER

When comparing sap yield, the white Maxflow spout gave a **sap volume 7% higher** than the black Maxflow spout.

CONCLUSION OF THE STUDY

In the studied sugar bush, white spouts gave a higher volume of sap compared to the black spouts.

This increase, recorded in the last part of the season, would be related to the color of the spout and its thermal absorption properties.

White spouts:
7% better performance

an INTENSE season

Gently, winter has passed and the sugaring season is on our doorstep. Freezing nights are followed by days of thaw. For producers then begin one to two intense months that require dedication, energy and passion.

Although producers often prefer to maximize the short sugaring period by harvesting sap through a tubing system that brings sap to the processing site, the short season will often require a producer to devote intensity and energy for nearly 120 hours per week.

maple ON THE TABLE

Nobody really knows how the Native Americans discovered the existence of maple sap nor how they managed to transform it.

There is quite a potential of flavors for cooking, which are otherwise impossible to create. Today, maple syrup is more sophisticated, the packaging is improved and the market is now worldwide.

Syrup, sugar and maple cream are well known. For some time, we have noticed on the shelves new products drawn from maple. Maple pearls, vinaigrettes, sauces, sweets... Even meat, soups and vegetables are delectable when enhanced with the discreet presence of maple.

Be that as it may, maple syrup is a real treasure. Versatile, it lends itself happily to the preparation of many sweet or savory dishes, from the appetizer to the dessert. Enjoy your meal!
